

Zephyr Lock

BETTER SECURITY THROUGH INNOVATION

Model # 5554 & 5570 Club Series Mechanical Shared Use Locker Lock System

The 5500 Series Mechanical Lock is one of only two multi-user mechanical built-in locker locks on the market intended for steel lockers. Its improved security capabilities make it the perfect choice for shared-use settings in locker rooms, fitness centers, employee rooms, and other facilities. The shared use capability allows facilities to conveniently allow their visitors to choose their own combination while eliminating the need to distribute keys, combinations, or padlocks.

Designed and engineered with user experience in mind, our shared locks have updated push buttons for improved user feel, fit perfectly in the recessed handles of most steel lockers, and can be customized with different face plate colors to complement any type of locker.

The various locking options provide an extra level of security and ease of use with spring latch and dead bolt locking options. Users can have peace of mind and rest assured that their valuables will be safe with our secure locking solutions.

FEATURES:

- Shared use operation allows users to create their own code
- User code is cleared after opening, allowing locker to be used by multiple individuals throughout the day.
- 10-digit keypad for a wide variety of combinations to keep items secure
- Engineered to work on most standard metal single point, box locker, gravity latch/multipoint lockers, phenolic, wood & laminate lockers and casework
- Control key allows supervisors to access lockers and clear codes
- Updated push button design for improved user feel and higher level of security
- Zinc die cast housing for increased security and durability in high traffic settings
- Available in spring latch or dead bolt models
- Works with both left and right hinged doors
- Extension kits available for use on ½" and ¾" doors
- No batteries required for a maintenance free solution.
