

Zephyr Lock

BETTER SECURITY THROUGH INNOVATION

Model 1730 / 1730ADA ADA Compliant Built-in Key Lock

Our ADA compliant lock was developed as an affordable solution to the current high cost of meeting the 5% requirement of ADA compliant lockers in schools. The lock is designed to work on lockers with lift latch mechanisms that are ADA compliant. It utilizes a mechanical operation which does not necessitate twisting of the wrist or more than 5 lbs. of force to operate as is required in section 4.27.4 of the ADA's Accessibility Guidelines for Building and Facilities. The lock is operated by the user by simply inserting the key to unlock and then lifting the handle on the locker door. To lock the locker the user only needs to close the door and remove the key.

FEATURES:

- The only mechanical built-in locker lock that meets ADA requirements
- Supervisory key control
- Each lock supplied with 3 keys
- For use on lift-latch/multi-point style lockers that normally operate with a #1930 Vertical Dead Bolt lock
- The 1730 ADA key lock has a 5-year warranty from time of shipment
- 72-hour shipping available
