

Zephyr Lock

BETTER SECURITY THROUGH INNOVATION

Model 1970 / 1971

Built-in combination lock with manual dead bolt

The 1970/1971 Dead Bolt series features a deadbolt locking mechanism for a high security lock option. For increased ease of use all locks are standard with an ergonomic dial, complete with a grip ring and non-slip coating. The Dead Bolt requires the end user to manually turn the non-slip dial to relock the door.

The 1970/1971 series is designed to fit almost all locker styles and is an ideal choice for ventilated lockers where the security can be an issue. Its nut channels allow for easy installation. Models are available for both right- or left-hinged lockers, as well as for ADA and top- or bottom-hinged lockers.

1970

1970ADA
