

Imagine how a wireless, cloud-based security solution could revolutionize your operation.

Zephyr Locks with Cirrus Technology™ are designed to unlock possibility. Monitor, manage, and maintain your secure locker facilities remotely with a state-of-the-art, cloud-based networked solution.

Intelligent Security, Intelligent Solutions

Imagine the Possibilities of Zephyr Locks with Cirrus Technology™

Control User Access Wherever You Are, Whenever They Need It

Gain full control of lockers from your command center. Remotely grant user access through pin code, RFID card, NFC-enabled smartphone, or the Zephyr Smart Lock App.

Record, Report & Manage User Access Activity in Real Time

Cirrus Technology™ automatically generates a comprehensive audit trail, recording lock activity with real-time accuracy: users, timeframes, facilities, access methods, and more.

Gain a Global Perspective of Your Entire Operation

Collect comprehensive insights into locker occupancy. Leverage data trends around usage, activity, and access to streamline operations and position your enterprise for success.

How Cirrus Technology™ Works

Each lock is controlled wirelessly through an advanced cloud management portal.

Cirrus Technology™ gives administrators the freedom to manage or control users remotely through a variety of access channels.

How Cirrus Technology™ Can Transform Your Business

Timely, Critical Deliveries

Expecting a time-sensitive delivery? Grant lock access for a specific timeframe, confirm receipt, and check activity to ensure the delivery was made within the required time.

Software & Firmware Updates

Updating your system? Automatically push software and firmware updates through the cloud to your network of lockers to keep your system up to date.

Theft Control & Security

Investigating a recent theft? Review user access remotely to identify specific timeframes, locations, and access methods in real-time.

Off-Site User Management

Managing multiple facilities? Add, remove, and edit wireless keyholders remotely through the Cirrus Technology command center.

Facility Usage

Evaluating facility usage? Review the audit trail on a facility-wide basis to identify areas of opportunity within your operation.

Innovative New Businesses

Imagining the possibilities? Cirrus Technology was designed to unlock possibility, and the applications of this state-of-the-art solution are endless.

Zephyr Locks with Cirrus Technology™ are designed to unlock possibility.

Here are just a few applications of this state-of-the-art technology.

"We're expecting an important package at our manufacturing facility. We're going to grant the delivery company access to a secure storage location from 8-8:30pm."

"I'm opening a luxury 24-hour fitness center. I want members to be able to gain entry to their lockers directly from their smartphone."
